Nicholas Good, BSc, PhD
nicholas.good@redspire.us

SUMMARY/BIOGRAPHY:

Dr. Nicholas Good is an environmental health and exposure scientist who has worked in academia and industry for the past 15+ years. His expertise includes the measurement and modeling of harmful air pollutants. He has worked across academia, government, and industry. He has applied his work in multiple areas including worker health & safety, policy making, instrument testing, and exposure mitigation. He has a doctorate in Atmospheric Science from the University of Manchester and a Bachelors of Science in Physics from Manchester University.

EXPERIENCE:

RedSpire LLC — *2025 – Current*
Principal, Exposure Science

Good Science LLC — *2019*
Founder

CloudSci LLC — *2023*
Co-Founder

Colorado State University — *2020 – 2026*
Research Scientist III - Civil & Environmental Engineering

Colorado State University
Research Scientist I - Environmental & Radiological Health Sciences — 2017 – 2020

Colorado State University
Postdoctoral Research Fellow - Mechanical Engineering — 2015 – 2017

Colorado State University
Postdoctoral Research Fellow - Environmental & Radiological Health Sciences — 2012 – 2015

The University of Hertfordshire
Project Manager - Department of Physics — 2011 – 2012

CNRS - Université Blaisé Pascal
Postdoctoral Researcher — 2009 – 2010

EDUCATION/DEGREES:

PhD, Atmospheric Science - Manchester University — 2009
BSc, Physics - The University of Manchester — 2005

PROFESSIONAL HONORS/AWARDS:

National Environmental Research Council PhD Scholarship — 2005
University of Manchester Physics Scholarship — 2002

PROFESSIONAL MEMBERSHIPS AND SERVICE TO PROFESSIONAL SOCIETIES:

NASA - Citizen Science Data Working Group
Reviewer - Aerosol Science and Technology
Reviewer - Atmospheric Chemistry & Physics
Reviewer - Atmospheric Environment

Not Retained

Reviewer - Atmospheric Measurement Techniques
Reviewer - Environmental Health Perspectives
Reviewer - Indoor Air
Member - American Society for Aerosol Research
Member - International Society for Environmental Epidemiology
Member - International Society of Exposure Science

SIGNIFICANT PROJECTS:

Atmospheric Processes

Measuring aerosol properties in laboratory simulated environments. Experience operating advanced aerosol instrumentation and analyzing data from facilities designed to simulate atmospheric processes. Contributing to a more complete understanding of the chemical mechanisms and pathways that lead to the formation of aerosols and their associated properties. Led to publications: Alfarra et al. 2008; Meyer et al. 2009; Duplissy et al. 2008; Alfarra et al. 2011; Hamilton et al. 2011; Alfarra et al. 2012.

Field Studies. Experience deploying and operating atmospheric instrumentation across multiple platforms in harsh remote environments. Led to publications: Whitehead et al. 2014; Paramonov et al. 2015; Whitehead et al. 2011; Levin et al. 2021; Megan L. Benka-Coker et al. 2020; Gibson et al. 2025; Irwin et al. 2009; Lee et al. 2010; Irwin et al. 2010.

Biological Aerosols

Infectious Disease Transmission. Designing and running experiments to quantify biological aerosol emissions from humans. Led to publications: Volckens et al. 2022; Tanner et al. 2023; Good et al. 2021.

Biological/Biogenic Particle Properties. Measuring and analyzing data to better understand the formation and properties of particles that originate from biological sources such are bacteria, virus, and vegetation. Led to publications: Amato et al. 2015; McFiggans et al. 2011; Alfarra et al. 2013

Exposure Assessment

Assessment Methods. Designing and evaluating approaches to improve exposure assessment, focusing on methods to predict inhalation of air pollutants. Led to publications: Greenwald et al. 2019; Good et al. 2019.

Holistic Exposure Assessment. Involved in the design, implementation, and analysis of approaches to assess exposure to air pollutants across multiple locations to obtain more complete assessments. Led to publications: Koehler et al. 2013; Good et al. 2013; Koehler et al. 2019.

Exposure & Health Outcomes

Health Markers. Linking markers of exposure and acute health effects associated with air pollutants in clinical studies in controlled laboratory settings and in field trials. Led to the publications: Ethan S. Walker, Clark, et al. 2020; S. Rajkumar et al. 2018; M.L. Benka-Coker et al. 2020; Sarah Rajkumar et al. 2018; Young et al. 2018; Rajkumar et al. 2019; Benka-Coker et al. 2022; Clark et al. 2018.

Cardiovascular Health. Studying the relationships between acute changes in markers of cardiovascular health and exposure to air pollutants. Led to publications: Walker et al. 2018; K. Fedak et al. 2018; 2019; Cole-Hunter et al. 2019; Fedak et al. 2020; Walker et al. 2022; E.S. Walker et al. 2020; Ethan S. Walker, Fedak, et al. 2020; K. M. Fedak, Good, E. S. Walker, et al. 2019; Young, Clark, et al. 2019; Benka-Coker et al. 2018; Cole-Hunter et al. 2021.

Not Retained

Instrument Development

Data & Algorithms. The development of models and data analysis approaches to characterize aerosol properties and mitigate instrument artifacts. Led to publications: Hoskovec et al. 2023; Good, Topping, Allan, et al. 2010; Tryner et al. 2019.

Measurement Techniques. The development and analysis of novel particle measurement techniques. Led to publications: McMeeking et al. 2011; Good, Coe, et al. 2010; Duplissy et al. 2009; Massling et al. 2011.

Mitigation of Exposure

Emissions. Characterization of pollutants emissions from various sources.
Led to the publications: Bilsback et al. 2019; K. M. Fedak, Good, E. Walker, et al. 2019; K. M. Fedak et al. 2018; K. Bilsback et al. 2018; van Zyl et al. 2019; K. R. Bilsback et al. 2018.

Mitigation Strategies. The design, testing, and analysis of approaches to reduce personal exposures to air pollutants. Led to publications: (Good et al. 2018; Young et al. 2022; Slater et al. 2022; Young, Peel, et al. 2019; Young et al. 2022; 2025; Good et al. 2016)

Modelling Air Pollutants

Model Parameterization. Simplification of complex atmospheric processes to facilitate modeling approaches. Led to publications: Good, Topping, Allan, et al. 2010; Good, Topping, Duplissy, et al. 2010.

Policy. Model optimization and applications for policy needs related to national and regional air pollution. Led to publications: Chemel et al. 2014; Abbott et al. 2012; Fraser, Murrells, et al. 2012.

Satellite Validation. The development, development, and analysis of instrumentation to validate satellite products related to air pollution. Led to publications: Cheeseman, Volckens, Ford, Jathar, et al. 2018; Wendt et al. 2019; Cheeseman, Volckens, Ford, Good, et al. 2018.
